2-Day Building Infrared Thermography Training Course

This hands-on course emphasizes practical knowledge learning, field training and includes a course exam. Students learn how to successfully operate the handheld infrared camera and efficiently incorporate it in their businesses. The course is designed to give new and experienced thermographers a solid understanding of infrared energy audit practices. An overview of the following topics will be covered:

Basics of IR Theory

IR Equipment Operation

Inspection Conditions Required

Air Infiltration/ Exfiltration

Air/Moisture Movement Thru Bldgs

Insulation vs Air leakage

IR Field Variables

Field Documentation/Quality Images

Understanding Energy Heat Transfer

Types of Building Heat Loss

Inside vs. Outside Inspections

Multi Family Buildings

AM vs. PM Results

Moisture Identification

Creating IR Inspection Reports

IR Camera Breakout (Hands on, in field)
