PORCH FOOTING PLAN

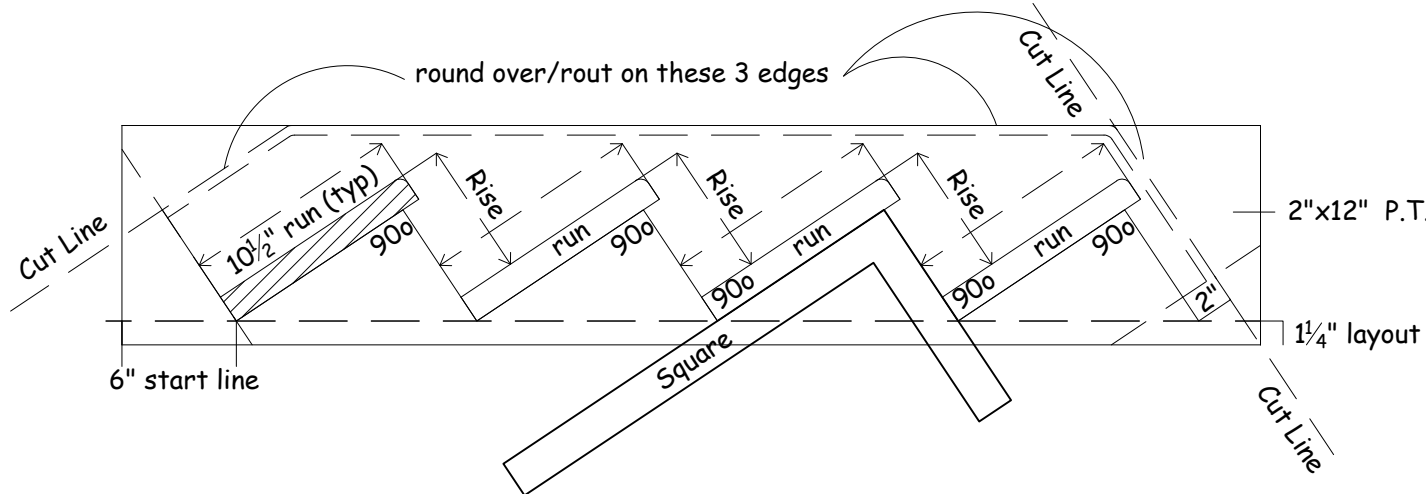

FRONT DECKING PLAN

FRONT PORCH ELEVATION

PORCH CROSS SECTION

Porch Stair Stringer Layout

NOTE:
All Porch Stair Runs are 10-1/2"

STEPS:
1. Level from top of decking to the point where bottom Step rests. (Total Rise= T.R.)
2. Divide T.R. by 8 as rise can not exceed 8" per rise. Go to the next full number. This will be the number of risers needed.
3. Take Total Rise and divide it by the number of risers.
4. The answer in decimals should be converted to fraction. (multiply decimal by 16 and have the fraction in 16ths.)

EXAMPLE:
Total Rise: 32-3/4"
32.75/8= 4.09 next full number=5
32.75/5= 6.55
.55x16=8.8 (round off 9)
9/16
Risers will be: 6-9/16"
Stairs will be: 5 risers @ 6-9/16" with 10-1/2" tread depth
