Over 2 MILLION homes have been rated and issued a HERS Index Score.

Builders use the RESNET HERS Index as a "Miles Per Gallon" consumer education piece on the energy performance of their buildings

The 2015 and 2018 International Energy Conservation Codes incorporate an Energy Rating Index Score option (same as HERS Index Score).

Over 300 state and local code jurisdictions across the nation have adopted a HERS Index Score option to their energy codes.

The RESNET HERS Index is driving an increase in the energy performance of homes. In 2017, the average HERS Index Score of homes rated in the U.S. was 62. This represents a 66% increase in the energy efficiency of a standard existing home and a 38% higher energy performance than a home built as recently as 2006.

The RESNET HERS Index Score is product neutral.

It is a whole house energy performance analysis that allows products to compete on a level playing field and hence hasten the introduction of new products into the marketplace.

Ensure your company's voice is heard by RESNET, and HERS Raters and builders, as they maintain the industry gold standard for home energy performance.

SAB Membership is open to all suppliers who agree to the terms of the RESNET Suppliers Advisory Board Member Agreement.

RESNET is the independent, national nonprofit organization that homeowners trust to improve home energy efficiency and realize substantial savings on their utility bills. RESNET's industry-leading standards are recognized by the U.S. Department of Energy and the U.S. Environmental Protection Agency, among others.
