

Leading the
Path to Net Zero
Energy Homes

April 7, 2025

The Honorable Mike Crapo
Chairman, Committee on Finance
United States Senate
Washington, D.C. 20510

The Honorable Jason Smith
Chairman, Ways and Means Committee
House of Representatives
Washington, D.C. 20515

The Honorable Ron Wyden
Ranking Member, Committee on Finance
United States Senate
Washington, D.C. 20510

The Honorable Richard Neal
Ranking Member, Ways and Means
Committee
House of Representatives
Washington, D.C. 20515

RE: 45L Energy Efficient Home Tax Credit

Dear Chairman Crapo, Chairman Smith, Ranking Member Wyden, and Ranking Member Neal:

We, the signatories of this letter support the 45L energy efficient home tax credit and ask that it not be legislatively eliminated or weakened.

As the Congress begins consideration of comprehensive tax reform, we'd ask that you consider the ongoing benefits of the New Homes Energy Efficient Tax Credit (IRC Section 45L).

This tax credit was initially passed in 2005 by a GOP controlled House and Senate and signed by President George W. Bush. Since that time, it has been extended and updated several times, with bi-partisan support. The policy has proven successful in enabling builders to construct more energy efficient properties that provide homeowners with significant cost savings every month on their utility bills. As the country grapples with skyrocketing housing costs, it would be counterintuitive to eliminate this Republican initiative that ultimately drives down homeownership costs.

We note that the 45L tax credit was amended as part of the Inflation Reduction Act (IRA). For that reason, we hope that it will be reviewed with an understanding that this is not an offshoot of the Biden climate agenda, but rather something championed by the GOP several decades ago. One could argue that the policy was enhanced by the IRA changes, which transformed the qualification criteria and made verification more stringent.

By our estimates the overall score of the 45L tax policy was dramatically reduced while improving the integrity of the policy. The IRA changes made the credit available to homebuilders who construct Energy Star (\$2,500), or Zero Energy Ready (\$5,000) certified homes. We'd ask that the Committee compare the tax score of the 45L credit prior to 2022 and look at the score for those years where data is available, following the amendments made in the IRA legislation.

We'd be happy to help provide further information on the range of energy savings homeowners can achieve in certain markets if they occupy a 45L compliant home. In most markets, this can be hundreds of dollars per year, which is then churned back into the local economy to pay for other daily necessities.

In short, we hope the Committee will not, "throw the baby out with the bath water" as Congress seeks to eliminate other tax incentives that have not stood the test of time. We would encourage the staff to seek input from other stake holders including but not limited to the large customer homebuilders who have utilized this tax policy to great effect. Helping homeowners with overall affordability should be recognized as part of any comprehensive review.
