What Is Adderall?

Understanding Adderall for Focus and ADHD

Adderall is a **prescription medication** that combines **amphetamine and dextroamphetamine**, primarily used for **Attention Deficit Hyperactivity Disorder (ADHD)** and **narcolepsy**. It helps enhance **focus, energy, and mental alertness** by increasing dopamine and norepinephrine activity in the brain.

How Adderall Works

The drug stimulates specific parts of the brain, improving **concentration, mood, and memory retention**. When guided by medical professionals, it can lead to **improved academic and work performance** without harmful effects.
